Logivations
logistic & innovations

Logivations is a Cloud Software and Consultancy company in Munich. Logivations is revolutionizing logistics using state-of-the-art deep learning and machine vision algorithms. Our solutions have already been awarded a "Top Innovation" by Volkswagen and analysts like Gartner, and we've been selected as part of nvidia's inception program, which gives us access to a lot of resources. To further extend our AI team, we are looking for

Machine Learning / Computer Vision Developer (m/w)

Your responsibilities

- Work on applications of machine learning and computer vision in logistics
- Implement, extend, and apply latest research in deep learning
- Provide input and expert knowledge for the design of novel solutions
- Work on applications including: guidance of autonomous vehicles in logistics, camera based object identification…

Your profile

- Master or Bachelor degree in Computer Science, Mathematics, Statistics, Operations Research or related field
- Track record of developing novel machine and deep learning algorithms and systems. Motivation to keep up to date with latest research
- Background or interest in computer vision technologies
- Experience with at least one deep learning framework such as Caffe/Torch/TensorFlow/mxnet
- Creative mind, be able to develop real innovations
- Strong desire to overcome obstacles and make your work benefit Logivations's customers
- Good English language skills

We offer you

- A challenging, exciting and very interesting job opportunity
- Possibility to apply latest research in real-world use cases
- Very good salary package, possibility for personal growth
- Great office environment including relax area
- A cooperative, highly motivated international young team
