

PRESS RELEASE

Great understanding of logistics market needs pays off

Logivations GmbH closes fiscal year with annual sales quintupled

Munich, 06. October 2011 – The Logivations GmbH, an international consulting and software solutions provider for the logistics completed an outstanding fiscal year 2010/11: Last year's turnover has more than quintupled. The total yield recorded exceptional growth rates.

Logivations-Management-Team

„The excellent result shows that we are able to detect challenges on logistics at an early stage and develop solutions for our customers that are easily implemented and affordable for all businesses,” said Dr. Christoph Plapp, Managing Partner – responsible for Corporate Strategy, Product Management & Development. Consequently, Logivations relies on the latest optimization and Internet technologies for logistics consulting, development of concepts and software solutions.

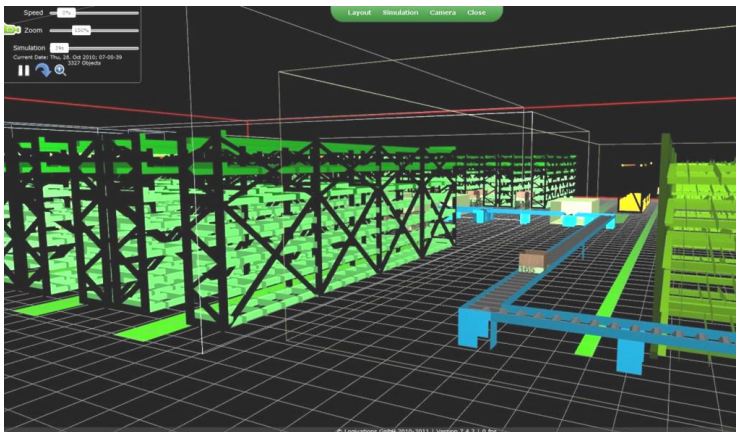

USP: Integration

The great success of Logivations W2MO[®] software solution is mainly due to the fact that it allows for the first time, indeed, the integrated design and optimization of logistics: from the design and optimization of logistics networks to the new planning and operational optimization of intra-logistics - a complete holistic package, which is unique on the market. Also a distinctive feature is that the solution can be used "on demand" directly over the internet browser. The user can start with just a few mouse clicks and immediately, after the registration on the W2MO[®] website, optimize the layout with first independent steps.

Therefore, the solution has already been awarded as "Best Product" at the logistics fair LogiMAT 2011 and won the INNOVATION AWARD 2011 at the CeBIT 2011.

„With W2MO® Logivations could successfully establish itself as an international specialist in integrated design and optimization of integrated logistics systems on the market and rise in a short time to the market leader position. This is proved by the fact that renowned software companies like SAP included our software in their offerings portfolio“, summarized Dr. Dominik Eberlein, Logivations Managing Partner – responsible for Consulting, Finance and Law.

Respectively, the company founders also foresee great success for the future - in Germany as well as worldwide.

W2MO® - Web-based planning, simulation and optimization tool for Intra-logistics

About Logivations

The Logivations GmbH is an international consulting and software solutions provider with offices in Munich and Lviv / Ukraine. The company develops and implements innovative solutions based on advanced Internet technologies for integrated design and optimization of Intra-logistics and enterprise supply chains. The software solution W2MO® is "the" Internet platform for design, optimization and evaluation of internal logistic processes – while being very easy to integrate. For advice on logistics network projects Logivations relies on the network optimization tool Supply Chain Guru® of the U.S. market leader LLamasoft Inc.
